

HIGHLIGHTS:

Heating System:
Baxi Bermuda
Fireback Non
Condensing
Boiler

Install Date:
Sep 2007

Results:

- **SYSTEM HEATING UP MUCH QUICKER**
- **RADIATORS HOTTER**
- **SILENT SYSTEM**
- **HOT WATER HOTTER AND RECOVERING MUCH QUICKER**

INTRODUCTION

Mr Melville reported that he had a Baxi Bermuda Fireback Non Condensing Boiler with gravity circulation. The system was very old, noisy and inefficient. It was very slow to heat the radiators and recovery was particularly slow especially for the domestic hot water. He was considering changing to a Combi boiler but we recommended he install a Tadpole.

PROBLEMS BEFORE THE INSTALLATION OF TADPOLE

- Banging and rattling radiators.
- Problems with air present in the system.
- Slow to heat radiators.
- Very slow to heat domestic hot water.
- Very inefficient system.

Mr Melville fitted Tadpole in September 2007 and reported that the improvement to his system was apparent within minutes of turning it on. Noise levels were greatly reduced and the pump was much quieter. Radiators were also heating up much faster. After standing overnight, the domestic hot water was still hot. The hot water is now heating to a higher temperature and therefore retains the heat for longer.

RESULTS ACHIEVED WITH TADPOLE INSTALLED

- System running almost totally silently.
- Radiators were heating up faster.
- Hot water was heating to a higher temperature.

SUMMARY

Mr. Melville is confident his gas bills will be much lower as the system is working more efficiently.
